

FROM IDEA TO FIRST PROTOTYPE

Vibe coding.

A workshop with Amit + Jason

About us

Amit Vijapur

CTO, DragonFly
Computer Science,
Durham
OpenAI Campus
Ambassador

Jason Cheng

CEO, DragonFly
Economics, Durham
Entrepreneur Society
President

Workshop plan

01 **Live demo + two frameworks**

Build in the background as we learn.

02 **Questions + discussion**

5–10 minutes

03 **Your own small project**

30–45 minutes

What is vibe coding?

You can build a first prototype
without knowing how to code.

You describe what you want. AI writes the code.

“I just see stuff, say stuff, run stuff, and copy paste stuff,
and it mostly works.”

Andrej Karpathy, AI researcher and former Tesla AI lead.

He named it in February 2025: building with AI without reading every line.

You still need to check what it builds.

Live demo

One audience. One problem. One useful action.

DEMO CONCEPT

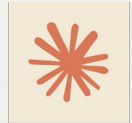

A tool that helps Durham students compare rentals across websites and find compatible flatmates.

Start the build in Codex. Then return here.

AI tools

ChatGPT

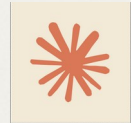

Claude

Shape your idea and write your brief.

Codex

Claude Code

Ask AI to build, run and improve your project.

Codex is today's demo.

Cursor

Lovable

Build in an AI editor or a browser-based app builder.

Choose a tool. Use the same two frameworks.

What makes up a good prompt

- 01 **Purpose** Who is it for? What should it help them do?
- 02 **Design** What should it look and feel like?
- 03 **Behaviour** What happens when someone uses it?
- 04 **Constraints** What belongs in this first version?
- 05 **Verify** What must work for us to call it done?

Prompt example

PRETEND CODEX CONVERSATION · TEACHING EXAMPLE

Codex

You

Hey, I want to make an app that helps students find our next club event.

Make it easy to read on a phone. When I tap “View details”, show me when and where it is. Just one page for now, with made-up details and no login.

Check that the right details appear and it works on my phone.

Ask a follow-up...

 Design

 Behaviour

 Constraints

 Verify

How to iterate and give feedback

- | | | |
|----|-----------------|---------------------|
| 01 | Check | Try the action. |
| 02 | Describe | Explain the change. |
| 03 | Change | Let AI update it. |
| 04 | Recheck | Try it again. |
| 05 | Save | Keep what works. |

Checkpoint = a saved working version.

How to give feedback

What happened

“View details” does nothing.

What I expected

Show the event time and location.

What to keep

Keep the current page design.

How to check

Click the button and check the details.

Then recheck the result yourself.

Feedback example

PRETEND CODEX CONVERSATION · TEACHING EXAMPLE

Codex

You

Hey, I tapped “View details” but nothing happened. I expected it to show the event time and location. Please fix that but keep the page looking the same. Then try the button and check that the correct details show up.

Ask a follow-up...

What happened

Expected

Keep

Check

Review the demo

What did we ask for?

What did we get?

Check the result

- | | | |
|----|-------------------------------|--|
| 01 | The main action | Does the button or action actually work? |
| 02 | Missing or wrong input | What happens if a field is empty? |
| 03 | A phone-sized screen | Can you still read and use it? |

Use fictional data. Review before real users or payments.

Make one improvement

- 01 Check what could be better.
- 02 Describe one focused change.
- 03 Let AI update it.
- 04 Recheck. Save the working version.

Q&A

Questions & discussion · 5–10 minutes

Teaching material adapted from Chai Pin Zheng (Ducksss) · github.com/Ducksss/vibe-coding-workshop

Visual reference: Orange by Marmalade 2025 · Marmalade Collective via Deck Gallery

Build your own project

30–45 MINUTES

Surplus-food marketplace

Browse sample meals and show a reservation.

Student freelance marketplace

Browse services and preview a request.

Creator–sponsor matching

Browse sample matches and preview a pitch.

Local service quote platform

Compare sample quotes for a job.

Build one interaction with made-up data. Improve it once. Check it.

Project schedule

5 min	Choose an idea + write your brief.
15 min	Build the first version.
7 min	Improve it + check it.
3 min	Save your working version.

Have 45 minutes? Add 15 to refine and review with a partner.

Two frameworks

01 How to prompt

Purpose · Design · Behaviour
Constraints · Verify

02 How to iterate and feedback

Check · Describe · Change · Recheck · Save
